
The Greatest News of Your Life

The greatest news Easter Week brought to mankind was that of the conquest of **polio** by the Salk **vaccine**. Long and painstakingly through tests in the laboratory and in the field have proven conclusively the **vaccine** is effective.

There is no doubt the dread disease has been conquered. In a short time, with further improvements in the **vaccine**, it may be wiped out completely and remain as nothing more than a name on paper.

Dr. Jonas Salk is the brilliant discoverer of the miracle **vaccine** and Dr. Thomas Francis, Jr., is director of the tremendous evaluation project by which its effectiveness was rated. These are names of benefactors of mankind that should be long remembered.

Every person who has made a contribution, no matter how small, to the March of Dimes in recent years, must take personal pleasure and pride in this magnificent discovery, for it was financed entirely by a grant from the National Foundation For Infantile Paralysis — a grant made up of the pennies and nickels and dimes and dollars of millions of persons in all walks of life who gave in the hope that **polio** would be wiped out.
